

3D Curved Glass

3D curved glass is formed using high-temperature gravity technique. It enables precise curved surface designs and provides unique visual effects and functionality for various products.

Features

- 3D curved glass exhibits excellent heat resistance and remains stable under extreme temperature conditions.
- 3D curved glass can be customized in different shapes, sizes, and curvatures to meet various specific industrial requirements.

Application

Automotive, consumer electronics, gaming equipment and other various displays.
